

## AirSense™ 10 AutoSet™ CPAP with Humidifier and ClimateLineAir™

The new S10 series is here! Technically referred to as the AirSense 10, this model replaces the previous S9 series so it has been anticipated for a long time it would take the S10 name.

AirSense 10 is AutoSet is a CPAP machine that automatically adjusts (increases and decreases) pressure settings as determined by an algorithm that detects airway closure. This technology is great for new and old users of therapy. New users benefit from a device that allows them to acclimate to pressure without the feeling of being overwhelmed by higher air settings blowing through the device and with the compliance information you can download information that indicates an optimal pressure range or fixed setting if your doctor indicates you should stay on one setting throughout therapy.

### What's New About the Airsense Series

- HumidAir
- AutoRamp™
- ClimateLine Air
- Advanced Event Detection
- SmartStart™
