

## Airfit™ P10

ResMed's ultra-light nasal pillow CPAP mask. This CPAP mask is easy to use with only 3 parts. Available in AirFit for Him and Airfit for Her model.

***Simplistic Design:*** There are only three parts that comprise the AirFit™ P10, QuietAir™ vent frame, headgear, and nasal pillow. The pillow can be easily added or detached from the assembly using the top and bottom clips. The headgear can also be removed for complete disassembly.

***Extremely Quiet:*** ResMed has pioneered a new mesh vent called ***QuietAir(TM)*** so the AirFit P10 is quieter than its predecessor, diffusing air with minimal disturbance to patients or their bed partners. ResMed's AirFit P10 maintains a secure seal while delivering facial freedom.

***Flexi Tube:*** The tube is ultra light, yet extremely durable. You can move as much as you like, without fear of breaking the seal. The mobility you get with the ResMed AirFit is particularly useful when you are getting to sleep and need to move around more. The AirFit™ P10 dual-wall nasal pillows are designed to adapt to movement. The stems of the nasal pillow easily compress up and down to allow for a comfortable seal to be maintained as sleeping positions change.

Available with three pillow cushion sizes (S, M, and L) to ensure fit and comfort, please note XS cushion is available, but not included in the standard system package.
